Company Profile

SALE,SERVICE & MANUFACTURERS OF WATER PROCESS SYSTEMS

Company Profile:

R S ENVIRO WATER & MANAGEMENT. started selling, installing, and maintaining RO based mineral water plants (Commercial) with DM & Softening plants in local market in 2019. An ever-growing demand for pure drinking water, quality of our product and prompt after sales service took us to incorporate a Regd. company. Thus, in 2020 **R S ENVIRO WATER** was formed by a group of chemical, mechanical engineers and technicians with many years of combined experience in the servicing, installing, design, consulting and of water desalination and purification using reverse osmosis technology.

The Company deals into Industrial RO Systems. The company manufactures packaged RO systems for ground, borewell, well, river and tap water applications in standard capacities of potable water production from 100 Liter per hour to 50000 Liter per hour, single, double, triple tube water filters with and without UV attachment, softener & water vending machines in various capacity. We can design, manufacture and install customized systems to meet our clients' requirements. We have supplied more than 50 industrial plants & service for various applications like bottled water manufacturers, soft drink manufacturers, hospitals, villages, schools, colleges, industries, corporate offices etc. We maintain a state of the art technologies and equipment to assist our engineers in the selection and designing of the most effective RO systems for the type of raw water available to each individual client.

R S ENVIRO WATER & MANAGEMENT

RS to work as a process contractor in Wastewater Treatment, Water Purification and Solid Waste Management, building on its core business of technical assistance. It offers in-house design, engineering, contracting and consulting to answer regional needs and provide feasible and appropriate solutions to companies for their compliance to increasingly stringent environmental regulations.

RS has two "environmental" market focus areas,

Environmental Audit, Design and Supply

- Project Management
- Geotechnical Services
- Feasibility studies, Design and Implementation Programs
- Engineering Design and Assessment Studies

Wastewater Treatment and Water Purification

- Municipal water/wastewater management and treatment
- Industrial water/wastewater treatment
- Water purification
- Water recycling and effluent reuse
- Oil / Water separation and flood protection

Environmental Management Services - Infrastructure

- Waste Water Facilities - 'Manpower Supply, Training - and Management'
- Maintenance Services / O&M Contracts
- Site & Equipment Reviews
- Equipment Refurbishment, Revamping, Upgrading
- Modification of Existing Plants
- Commissioning of Equipment

RS Public and Private Sector References

- Hospitals
- Municipalities
- Oil and Gas
- Manufacturing Industries

RS ENVIRO WATER & MANAGEMENT

- Pulp and Paper
- Housing Estates
- Department Stores
- Hotels and Resorts

Water Treatment Systems & Equipments

For drinking water application at Group Housing Societies
For process water and boiler feed water application at Industries For packaged drinking water application
For Dialysis machine water application at Hospitals
Domestic drinking water
Pharmaceutical use
Solute concentration in solvent such as protein concentration

Wastewater Treatment Systems

Physio-chemical treatment plants
Wastewater recovery using membranes for process Oil water separators and recovery systems

Types of services offered:

Marketing and Supply of:

1. Mineral water plant based on reverse osmosis technology suitable for bottled water plant, beverage industries, village plants, swimming pools, pharmaceutical industries, textile industries, green houses, farmhouses, and poultry farms

2. Waste Water Treatment Plant (ETP/STP)

3. Drinking water filtration system with & without UV.

4. Industrial RO mineral water plant for office, restaurant, laboratory, clinic, hospital etc.

5. Water softening plant for hard water for applications like industry, laundry, boiler, soft

R S ENVIRO WATER & MANAGEMENT

drink plant, ice factory etc.

6.Annual maintenance contract for all WTP systems supplied by us & other companies.

7.Supply of spares, Chemicals and Consumables for water treatment industry.

8.Demineralized water plant for paper mills, testing labs etc.

Why R S ENVIRO WATER & MANAGEMENT. for RO?

When you buy domestic equipment like TV, refrigerator, washing machine etc., you buy the product, bring it home, plug in the power supply, and switch it on; it starts working as per your expectation. But in the case of reverse osmosis based water purification system it is not like that. Mainly because it is a pressurized system and the quality of feed water is different everywhere, which demands expertise at the stage of designing of the plant, also regular routine care by the user, and periodical service by the technician is essential. We have fully trained Technician to look after all the industrial plants supplied by us. We are committed to attend the service complain and solve it within promised time.

Marketing Scenario:

Every year 42 crores 40 lacs liter mineral water is being produced in the world by mineral water industry. The per capita per year 0.5 lit. Mineral water consumption is there in India. This is very less in comparison to other countries.

In USA it is 140 lit. Per capita per year. Looking at this there is a tremendous growth prospect for mineral water industry in India. As per market research the demand for pure drinking water will go on increasing. From March 2002, Ministry of Health, Govt. of India has announced new bottled water standards. It says that almost all bottled water plants would be based on reverse osmosis technology. In the Year 2005-06, WASMO, Gandhinagar and village pani samiti together starting install the R.O. plant for community people of village with

approved grant of government. (90:10) in various schemes. Studies conducted by health authority show that 10 percent of urban water source in India are

R S ENVIRO WATER & MANAGEMENT

contaminated and **80 percent of human diseases are water borne**. Rising population along with unplanned industrial growth has led to natural resources getting polluted. Previously, DM plants were installed to provide feed water for **kidney dialysis plants** in hospitals all over India. Recently, The Journal of Indian Medical Association recommends the use of RO water for Kidney dialysis units. When RO water is **used in poultry farm for the raising of chickens**, it is found that growth time was reduced by 15% and the life span and survival rate was increased significantly.When RO water is **used for laundry purpose, less detergent is required** to wash the clothes. RO water helped to preserve color fastness, brightness, softness of the material.**Restaurants** can install RO plants and serve complimentary mineral water to their customers. This will help in the **growth of their business** to great extent. If RO water is **used in green houses to feed plants**, it will reduce the growth time, less fertilizer is required and fertility of the ground will be improved. Soil quality is preserved and does not deteriorate over a period of time. In **Metal plating** industry RO water improves the **quality of plating**, saving precious energy.**RO Water &**

Your Food: Water does an excellent job during cooking food. If you are using normal saline water for cook your food, than the food need more spices, it is dull in colour, using more inflammable energy etc. And if suppose we use Mineral water for cooking you save your money as well as time like saving of spices, savings of inflammable due to less time to cook food and most important is the colour of your food is shining.

RO water and your skin and hair: Water does an excellent job of beautifying skin and hair from the outside, but it is also important to remember that what happens inside your body has a great deal to do with your outer look. Water is a basic ingredient whenever we bathe, wash our hands or face, or shampoo our hair. But for this water should be soft, because when hard water comes in contact with skin, it may leave behind a white film or lead to redness and irritation of the skin. Hard water can leave behind minerals in the air that can alter its true color. You require more soap to get skin clean. Therefore it is always advisable to use soft water for this purpose. Shampooing with soft water leaves hair clean and smooth with a lustrous shine.
